

## Scientific Knowledge Services and Writefull partner to offer artificial intelligence (AI) tools for improving academic writing

**Munich and London, 27 January 2021:** Scientific Knowledge Services (SKS; [www.knowledge.services](http://www.knowledge.services)), the European service provider for research and research support organizations and Writefull <https://www.writefull.com>, announce a new partnership to support researchers improving their academic writings, through artificial intelligence (AI).

Both organisations discussed the possible impact of AI in the scholarly communication, especially in text composition and found themselves supporting a common set of values which enhances transparency and human decision.

*“Artificial intelligence is a vast domain which has the potential to support human endeavors, including research activities. We believe the AI should primarily assist consumers at an affordable cost while being built with algorithm-level transparency. We are confident that our partnership with Writefull will help researchers improve their scholarly communication activities on both fronts: expert-to-expert and expert-with-society. We found in Writefull a responsible partner and we step with confidence in a relationship which we believe will help scholars to better communicate their most brilliant ideas”,* says **Tiberius Ignat**, PhD, the director of Scientific Knowledge Services.

*“Writefull is happy to expand our partnership network and work with Scientific Knowledge Services to offer our tools to institutions. We can better serve our customers with partners who are genuinely committed to researchers and their needs, and who have expert local knowledge and outreach in the community. Helping authors and students to improve their academic writing is our key goal”,* - says **Juan Castro**, PhD, co-founder and CEO of Writefull.

**About Scientific Knowledge Services:** [www.knowledge.services](http://www.knowledge.services) Scientific Knowledge Services is a company which specializes in helping the European research organisations to embrace new technologies and ways of working. Since 2015, we run a successful series of workshops in partnership with UCL Press and LIBER Europe - [Focus On Open Science](#). The company is helping research organizations, libraries, and publishers to develop modern science communication programs, nurture communities or research practice, develop citizen science programs and offer consultancy for a transition to Open Science practices.

**About Writeful:** [www.writefull.com](http://www.writefull.com) helps students and researchers with their scientific English writing by giving

deep and comprehensive language feedback. It uses AI-based algorithms that have been trained on millions of published papers. Thanks to this, Writefull's feedback is uniquely tailored to scientific & academic writing. Writefull offers a suite of tools including Writefull for Word and Writefull for Overleaf which helps during the writing process, as well as web-based Writefull Revise and Writefull Cite, which help improve the text at the final stages and review and find missing citations and references, based on semantics models. Writefull provides practical help to follow the norms and patterns of academic writing, tailored to researchers' needs. Writefull helps to get research outputs published in the best journals.
